

NOKOMIS ENERGY

CASE STUDY: City of Farmington

Long Term Energy Savings You Can Count On

The City of Farmington knows they will be saving money on their electricity bills by subscribing to community solar. That's because their Fixed Savings Rate contract with Nokomis Energy provides them certainty of the value of the bill credits they receive. The savings-only approach means more solar in Minnesota and lower energy bills for the City.

\$13,000+

Estimated Year 1 Savings

\$293,000+

Estimated Lifetime Savings

Nokomis Energy's approach of delivering savings from off-site solar allowed the City to capture the benefits without having to make any changes to their facilities.

About the City of Farmington, MN

With a population of 23,000 people, Farmington manages a number of community facilities. Subscribing to community solar allowed them to offset energy costs to their City Hall, Ice Arena and Senior Center, among others.

"Nokomis Energy's fixed savings rate made all the difference. We looked at Community Solar in the past but could not get comfortable with the long-term risks until now. We can now plan for savings, lowering our operating budget and enhancing our city services thanks to solar."

- Adam Kienberger, Community Development Director - City of Farmington

Company Overview

Nokomis Energy is a Minneapolis based energy developer with a mission to accelerate local energy adoption through equitable partnerships. Our approach is predicated on creating value for all stakeholders involved in a project. We specialize in understanding the full development process from origination, to technology, to long-term operation. Our value comes from our 25+ years of combined experience, in market resources and partnership approach. Through a combination of development and consulting services we use distributed energy to deliver economic and social benefits to local communities.
